
ACCESSIBLE RECYCLING OPTIONS

With the help of industries like Waste Management and non-profit organizations like Call2Recycle and Earth911, Engineering for the Earth is helping communities and businesses come together to increase awareness of available and convenient methods of recycling. Engineering for the Earth helps serve as a liaison for expanded recycling options, which exceed current locally offered programs. Examples include collection of CFL, battery and medical waste through job site recycling programs, residential drop-off sites and personal recycling options.
