

COLLABORATION WITH LOCAL BUILDERS AND DEVELOPERS

Engineering for the Earth is building a relationship with a regional builder/remodeler, The Final Cut, in Wilmington, NC. Our Organization is helping The Final Cut incorporate more sustainable practices in their business and building methods. Engineering for the Earth will work with The Final Cut to find and make available affordable renewable product lines for their customers. In turn, The Final Cut will help Engineering for the Earth make connections with regional developers who are possible clients for our consulting services. With the support of a partner who is familiar with the construction and development industry, our chances of making meaningful progress with other builders and developers are increased.
